NSU Wireless Internet Setup (Chrome OS)

Your wireless network card must be able to support WPA2 (Wi-Fi Protected Access) security to connect to the NSU network.

**Step #1:** If you have never setup an NSU wireless network on your computer before, please skip to **Step #4**.

Click on the **Taskbar Option** section at the bottom right corner of the screen.

Then, click **Gear** icon at the bottom right of the list.

**Step #2:** Click the **Wi-Fi** section in the list.

**Step #3:** You must **Forget** each of NSU’s networks (nsula, nsulaguest & student) by clicking the arrow at the right side of each network. Then, click the **Forget** button in the options window. If you do not see the **Forget** button, you have not attempted to connect before.

Restart your computer after forgetting all NSU networks.
Step #4: Click on the Taskbar Option section at the bottom right corner of the screen.

Then, click Gear icon at the bottom right of the list.

Step #5: Click the Wi-Fi section in the list.

Step #6: Click student to access the setup options.
**Step #7:** Select the options listed in the screenshot.

Then, type your myNSU username in the **Identity** box and your myNSU password in the **Password** box.

Leave the **Anonymous Identity** box blank.

Click the **Connect** button.

**Step #7:** Your computer will show that **student** is **Connected** after the authentication is complete.
