

Stream Captioning

Stream is equipped with captioning services to easily create accessible videos. When uploading a video to your Stream library, make sure that English is the correct language for the video, and that “Autogenerate a caption file” is checked in the **Options** menu.

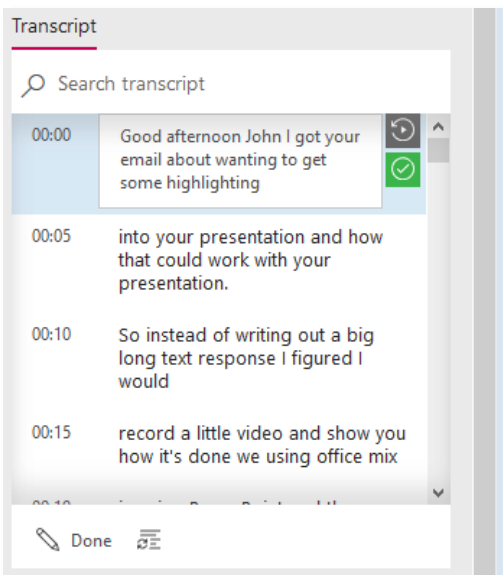

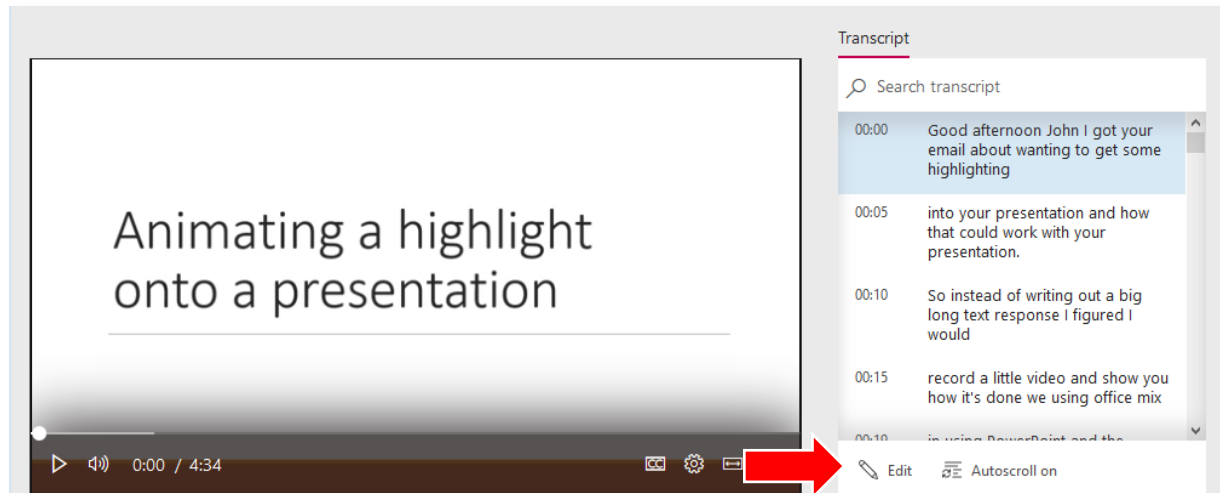

Once you’ve published your video and it is fully processed, a caption file will be automatically created. This file created will have predicted incorrect words, so these captions will need to be corrected before the video can be considered accessible.

Find your video in your video library by going to **My Content** in the top navigation bar and clicking **Videos**. Click on the video title in this list.

On the video's page, you will see the automatic transcription on the right. Click Edit beneath the transcript and begin by clicking on a section of text with an error.

When editing the transcript, the grey icon next to the text box allows you to hear that section of audio again to ensure accuracy. Click the **Green Check** when you are done with that section. When you are finished correcting the transcript, click **Done** at the bottom of the window.

Now your video has accurate subtitles! It can now be shared via link or embed code to your courses or pages. If you have any questions about this process, feel free to contact us at ECE@nsula.edu.
